

PCI Wellness Program

Painless Screening Procedures are available that may or may not be covered by insurance and do not require a physician's referral or consultation. To learn about this important PCI Wellness Program, please contact the PCI clinic or visit the clinic during regular business hours for more information. These preventive screenings are designed to identify health problems early when treatment has the best possibility of success and before you have developed any signs or symptoms. We see this preventive program as an investment in your own health and well being and as one means to maintain a better quality of life.

"Your One-Stop Diagnostic Center"

New Technology

Diagnostic imaging is a vital component of the healthcare system in the United States. Its component parts are the patients, payers, physicians, hospitals, and other providers. Diagnostic imaging as a non-invasive procedure has substantially replaced exploratory surgery and other invasive procedures that historically require extensive recuperation time, patients discomfort, hospital admissions and delayed results for the physician. Few procedures in the operating room are performed today without first ordering a series of diagnostic imaging tests to target the health problems, the degree of severity and to determine how to clinically proceed in the most efficient and safe manner. This equipment reduces the patient's exposure to radiation by 70% with faster procedure times and quicker test results for the doctor.
